

Direct Replacement!

The banning of mercury contactors in California has prompted MDI, a manufacturer of those banned contactors, to develop a modern solution.

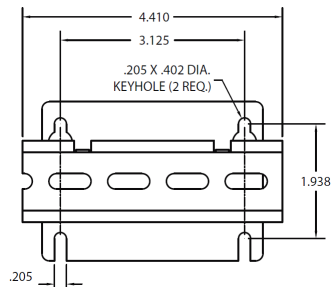

The MDI Solid State Relay is designed to replace mercury contactors directly!

With a custom designed mounting bracket, this SSR can use the same mounting holes as your existing mercury contactor. It accepts the same 120/240VAC or 24VDC signal. Easy replacement.

Ratings

3 Pole 50 AMP @ 480 VAC @ -30°C to 50°C 3-Phase
2 Pole 75 AMP @ 480 VAC @ -30°C to 50°C 3-Phase

Use 2 or 3 pole!

There *is* one hitch. It has a fan; the fan *must* be used to keep the SSR cool. The fan requires 24VDC @ 70 mA; a 120VAC fan is available (add \$55). We also have a 24VDC Power Supply which can power 18 of these fans.
