Introduction

A new standard of performance and functionality in a compact preset counter. The V454503 Batch Preset Counter offers a pre-settable counter with full calibration for a variety of applications. The V454503 Counter may also be used as an 8 -digit single preset counter.

The bright red LED display provides simultaneous count and preset indication. The use of annunciators and simple key sequences makes operator changes quick and easy. A variety of count sources are accommodated, including relay and pushbutton contacts, photocells and proximity switches and uni- or bi-directional incremental encoders.

The open collector output can interface to light duty devices and the relay contacts offer heavy duty load switching.

Set-up and installation are simplified through front panel entry of configuration parameters and a unique no tools required panel mounting bracket.

The V454500 family of preset counters combines state-of-the-art circuitry and electronic assembly techniques with an ergonomic package design that results in the most cost-effective, high-performance counter value on the market.

Technical Manual #701935-0003

VEEDER-ROOT

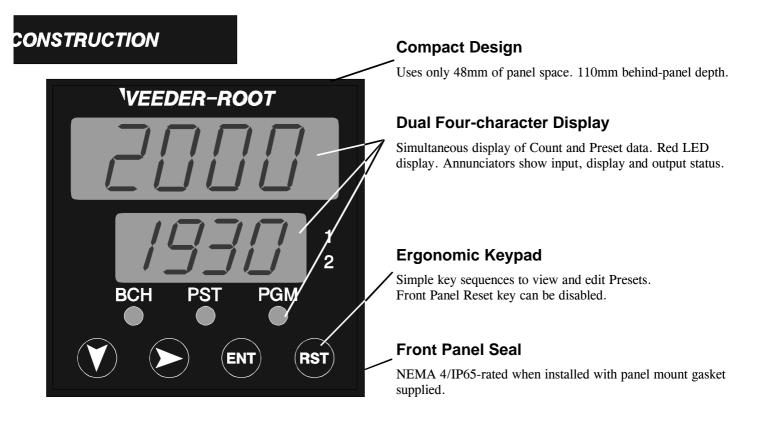

V454503 Batch Preset Counter

Features

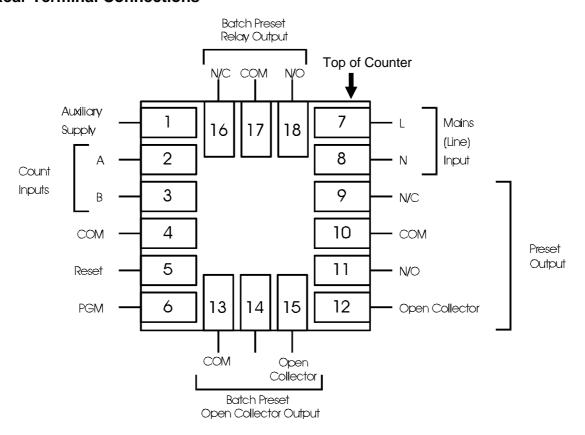

- * Dual four-digit displays for Count and Preset values
- * 10kHz count speed
- * Add/Subtract or bi-directional count inputs
- * Digital calibrator and programmable decimal point
- * Accepts current sinking or sourcing devices
- * Key reset, remote reset and auto reset modes
- * Reset to zero or preset number
- * Relay (SPDT) and open collector outputs
- * Accessory sensor power supply
- * Universal 90 264V AC power requirements
- * NEMA 4/IP65 sealed front panel
- * Designed to comply with EN50081 and EN50082 EMC specifications

Rear Terminal Connections

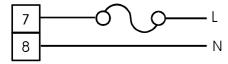

INSTALLATION

WIRING

IMPORTANT: In severe electrical noise environments, shielded cable is recommended for inputs and outputs. Connect the shield only to the building earth (ground).

AC Power Input

Connect AC power to Terminal 7 (Line) via a 1A slow-blow fuse and to Terminal 8 (Neutral) - see below. AC power should be from a separate branch circuit which is noise-free and does not feed heavy loads.

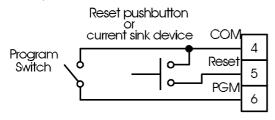

DC/Low Voltage AC Power Input

Connect DC/low voltage AC power to Terminal 7 (+) via a 0.5A slow-blow fuse and to Terminal 8 () - see below. DC power should have low ripple and be noise-free.

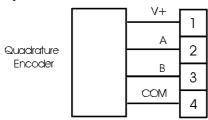

Reset and Program Inputs

Connect Reset pushbutton or current sink device to Reset (Terminal 5) and COM (Terminal 4). Connect Program switch or jumper to PGM (Terminal 6) and COM (Terminal 4).

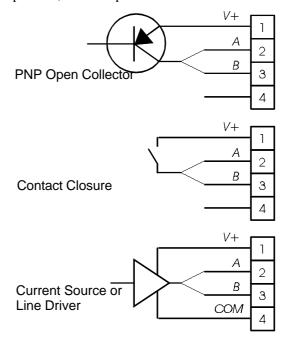

Bi-directional Quadrature Inputs

Connect Quadrature Encoder to V+ (Terminal 1), A input (Terminal 2), B input (Terminal 3) and COM (Terminal 4) as shown below. In Configuration Mode, set **InPu** parameter to **QuAd**. For NPN open collector devices with no pullup resistors, set **PuLL** parameter to **YES**.

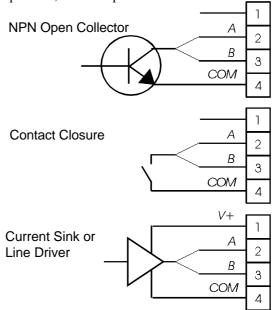

Current Sourcing (PNP) Count Inputs

Connect Add count input to Terminal 2 (A) and/or Subtract count input to Terminal 3 (B) - see below. In Configuration Mode, set **PuLL** parameter to **no** and, for Add/Subtract operation, set **InPu** parameter to **A-B**.

Current Sinking (NPN) Count Inputs

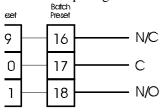

Connect Add count input to Terminal 2 (A) and/or Subtract count input to Terminal 3 (B) - see below. In Configuration Mode, set **PuLL** parameter to **YES** and, for Add/Subtract operation, set **InPu** parameter to **A-B**.

INSTALLATION

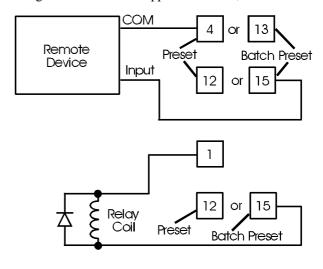

Relay Output

Connect AC or DC load circuits to Terminals 9, 10 & 11 Preset 1 output) or 16,17 & 18 (Preset 2 output) (see below) as required. Do not route load wiring near count input or ransistor output signals.

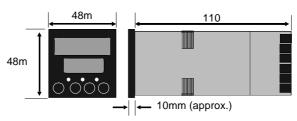

Open Collector Output

Connect Terminals 12 (Preset 1 open collector) and 4 (COM) or 15 (Preset 2 Open Collector) and 13 (COM) to solid state devices as below (upper circuit). To drive DC relay coils, connect Terminal 1 or 15 and V + (Terminal 1) as below (lower circuit). Suppress switching transients with a suppression diode, connected as shown.

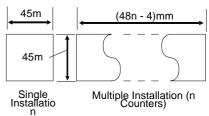

PANEL MOUNTING

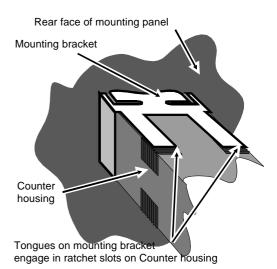

Panel Mounting

Make cut-out(s) according to the details in the diagram on the right. The maximum panel thickness is 6 mm.

Insert the rear of the Counter housing through the cut-out (from the front of the mounting panel) and hold the Counter lightly in position against the panel. Ensure that the panel gasket is not distorted and that the Controller is positioned squarely against the mounting panel. *Apply pressure to the front panel bezel only*. Slide the mounting bracket in place (see right) and push it forward until it is firmly in contact with the rear face of the mounting panel (tongues on the bracket should engage in matching rachet positions on the Counter housing and the mounting bracket springs should push firmly against the mounting panel rear face).

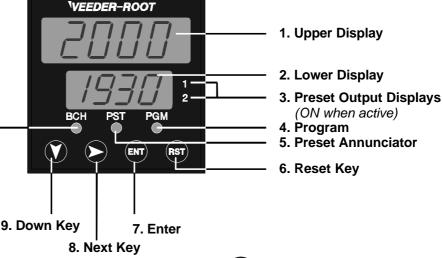

CAUTION

Do not remove the panel gasket from the Counter as this may result in inadequate clamping of the Counter in the mounting panel.

OPERATION

RONT PANEL

10. Batch

Down key

Operator Mode: Used to change the currently-selected (flashing) digit. Depressing this key will decrement the value (wrap-around from 0 to 9). If the key is held continuously, the value will decrement at the rate of 2/sec.

Program Mode: Used to advance from one parameter to the next. Once a parameter value has been selected for editing (through use of the Next key), depressing this key will decrement the value (wrap-around from 0 to 9). If the key is held continuously, the value will decrement at the rate of 2/sec.

Configuration Mode: Used to advance from one parameter to the next.

NOTE

To abort changes to a parameter value, press Down and Next together instead of ENT.

IMPORTANT

In Edit Mode, you must press the ENT key within 15 seconds of the last keypress, otherwise the new data will be lost and the old data will be restored.

ENT key

Operator Mode/Program Mode:

Confirms an edited value (display will cease flashing after the **ENT** key is depressed).

Configuration Mode: Confirms setting/value selection (display will cease flashing after the **ENT** key is depressed).

For information on Operator Mode, see Page 6. For information on Program Mode, see Page 7. For information on Configuration Mode, see Page 8.

Next key

Operator Mode: Used to select a parameter for editing (left-most digit will start to flash) and to move between the digits. Once the proper digit is selected (flashing) with the Next key, its value can be altered through use of the Down key.

Program Mode: Used to select a parameter for editing (left-most digit will start to flash) and to move between the digits. Once the proper digit is selected (flashing) with the Next key, its value can be altered through use of the Down key. For Decimal Point Position, this key scrolls through the available choices.

Configuration Mode: Used to select a parameter for editing and to scroll through available choices.

RST key

Operator Mode/Program Mode: Resets count value to either zero or Preset value (based on the setting of the Count Direction parameter in Configuration Mode). Also releases latched outputs.

Configuration Mode: Exits Configuration Mode when held down for 2 seconds.

NOTE: The **RST** key will not be active unless enabled in Configuration Mode.

PROGRAMMING

OPERATOR MODE

NOTE

Use Down key to step through Count/Preset display, Count/Batch Preset display and Count/Batch Count display (Count/Preset display will be shown on power-up).

TO ABORT AN EDIT

To abort an edit operation (before the new value is confirmed), press the Down and Next keys together.

TO RESET THE BATCH COUNT

To reset the Batch Count (to zero or to the Batch Preset value, according to the Count Direction parameter setting in Configuration Mode):

- 1. Select the Batch Count display in the lower display.
- 2. Press the Next key and the RST key simultaneously.
 NOTE: This is the only way to reset the Batch Count. It cannot be reset via the rear terminals.
 The RST key is operative for this function even when disabled in Configuration Mode.

SETTING THE PRESET VALUE IN EIGHT-DIGIT SINGLE RESET COUNTER (UP_8) MODE

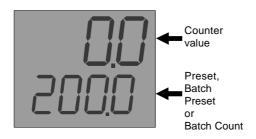

To set a Preset value of **abcdefgh**:

- 1. Select the Count value/Preset value display (PST ON, BCH OFF) and enter efgh in the lower display in the normal manner.
- Select the Preset value/Preset value display (PST ON, BCH ON) and enter abcd in the lower display in the normal manner.

WARNING!

Caution should be observed if it is necessary to change the preset value while the process is operating. Do not set values which are already exceeded by the count value without resetting the counter.

The Operator Mode is used for viewing the Count/Batch Count value and viewing/changing the Preset/Batch Preset value.

NORMAL OPERATION

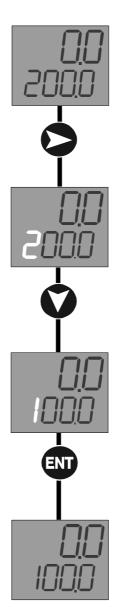

LED(s) ON	Lower Display	
PST	Preset	
BCH & PST	Batch Preset	
ВСН	Batch Count *	

* "View Only" display - not editable.

8-DIGIT SINGLE PRESET COUNTER (UP_8) OPERATIOI

LED(s) ON	Upper Display	Lower Display
PST	Count value *	Preset value (bottom 4 digits)
BCH & PST	Preset value (bottom 4 digits)	Preset value (top 4 digits)
всн	Count value (bottom 4 digits) *	Count value (top 4 digits) *

* "View Only" display - not editable.

Press the Next key to enter Edit Mode. The most significant digit of the Preset Data display will then flash. Press the Next key repeatedly as required to select the desired digit.

Press the Down key to change the value of the selected digit (there is wrap-round from 0 to 9).

When all digits are as required, press the **ENT** key to confirm the changes; the display will stop flashing.

IMPORTANT

You must press the **ENT** key within 15 seconds of the last keypress when entering a new value, otherwise the new value will be discarded and the old value will be retained.

PROGRAM MODE

WARNING!

Changing Program
Mode parameter values
while the process is
operating may be
hazardous to the
operator and/or the
controlled equipment.
Use extreme caution
and stop the process
before attempting to
change Program Mode
parameter values.

IMPORTANT

You must press the **ENT** key to implement new parameter values.

NOTE

Possible Decimal Point Position settings are:

To enter Program Mode, set the PGM input active (low) e.g. by tying it to COM. Whilst in Program Mode, the PGM indicator will be ON.

	Function	Parameter Description (Upper Display)	Meaning
	Pre-scaler	cal)	Pre-scales counter operation (multiply from 0.001 to 9.999) Value = Count units displayed Count pulses input
	Preset Output Time	E_0	Sets momentary ON time for Preset output (0.01 - 99.99s; 0.00 for latched operation)
Y	Batch Preset Output Time	L_02	Sets momentary ON time for Batch Preset output (0.01 - 99.99s; 0.00 for latched operation)
	Decimal Point	dEcP	Defines decimal point position
	Operator Mode:	None	
	Preset	None	Shows Preset value
	Batch Preset	None	Shows Batch Preset value
V	Batch Count		Shows Batch Count value

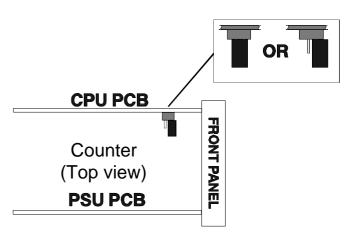

NOTES

- 1. To adjust Pre-scaler, Out Time or either Preset or Batch Preset value (as selected), press Next key to enter Edit Mode (digits will flash), use Next key to select each digit to be adjusted, and adjust digit value using Down key. When adjustment is complete, press **ENT** key to exit Edit Mode (digits will become static).
- 2. To adjust decimal point position, select that parameter, press Next key to enter Edit Mode, then use Next key to position decimal point. Press **ENT** key when finished.

To exit Program Mode, set the PGM input inactive (High).

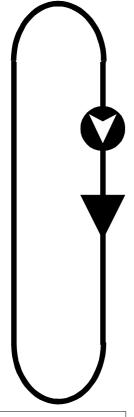

CONFIGURATION MODE

To enter Configuration Mode, power-down the Counter and remove it from its housing. Change the position of the link jumper on the CPU PCB (the actual position is irrelevant, as long as the position is changed). Replace the Counter in its housing and power-up. The PGM indicator will flash whilst the Counter is in Configuration Mode.

To edit a parameter, use the Down key to step through the parameters; when the desired parameter description is shown in the upper display, press the Next key to enter Edit Mode and to scroll through the available settings. When the desired setting is shown, press the **ENT** key. The Configuration Mode parameters, in order of appearance, are:

Parameter	Parameter Description (Upper Display)	Available Settings
Counter Speed	586	200 FULL 20Hz 200Hz 10kHz
Input Operation	InPu	A-B Quadrature 8-digit Single (Add/Subtract) (bi-directional) Preset Mode
Panel Reset Key	PE5	EnAb Disable
Auto Reset	A-ES	Enable Disable
Input Pull-Ups	PULL	Yes No (current-sinking)
Count Direction		Up-counting Down-countin
Lock Strategy	Loc	None Lock Program Program Lock

NOTE

When Input Operation is set to **UP_8**, counter counts up from zero only (top 4 decades in Batch Preset, bottom 4 decades in Preset).

LOCK STRATEGY:

None = No security; all parameters available through regular methods of access

Preset Lock = Preset/Batch Preset become Read Only
Partial Lock = Output ON times are Read Only

Both = Operator Mode parameters and Output ON times are Read Only.

To exit Configuration Mode, either momentarily remove power from the Counter or press and hold down the RST key for at least two seconds.

APPENDIX A

SPECIFICATIONS

Input Power

Terminals 7 (Line) and 8 (Neutral) AC:

90 - 264V 50/60Hz (standard) 20 - 50V AC 50/60Hz (option)

DC: Terminals 7 and 8; 22 - 65V (option)

Power consumption: 4W approx.

Output Power

DC: Terminals 1 (+) and 4 (COM)

9 - 15V DC (unregulated) 0 - 100mA. @0.5V ripple

Main Counter

Decades: 4, Bi-directional

(8, uni-directional in UP 8 mode)

2 (4 decades each) - Preset/Batch Preset Presets:

1 (8 decades) in UP_8 mode

Operation: Add/Subtract (Input A counts up, Input B

counts down) or bi-directional (quadrature;

counts up when Signal A leads Signal B).

Direction: Up (reset-to-zero) or Down

(set-to-a-number)

Count Rate

High: 10kHz max. Medium: 200Hz max. 20Hz max. Low:

Manual or automatic. Resets:

Selectable reset-to-zero

or reset-to-Preset

Calibrator

Range: 0.001 to 9.999

Common to Inputs A and B.

Count Inputs

Signal A: Terminal 2 Terminal 3 Signal B:

Input Voltage

3.0V (source)

3.0V or open (sink) ®2.0V or open (source) Low:

@2.0V (sink)

30V DC Max .:

Input Impedance

 $10k\Omega$ to COM Source: $4.7k\Omega$ to +V

Input Response: 0.05ms (high speed) 2.5ms (medium speed) (Source or sink)

25.0ms (low speed)

Control Inputs

Remote Reset: Terminal 5 (edge-sensitive) Program Mode: Terminal 6 (level-sensitive) High - 3.0V or open Input Voltage:

Low - ®2.0V

 $4.7k\Omega$ to +VInput Impedance: Input Response: 25.0ms 30V DC Max .:

Front Panel Keys

Type: Mechanical switches under sealed

membrane overlay.

Display

Type: LED (red) 4 digit Height: Upper - 0.4" (10mm)

Lower - 0.3" (7mm)

Security

Preset data can be protected (selectable in Configuration Mode). Program data is accessible only if the PGM input is active.

Output

Operation: Output 1 energised when:

> Count = Preset 1 (Up mode)Count = 0 (Down mode)

Output 1 released when:

Hold time elapses or reset

occurs

Output 2 energised when:

Batch Count = Batch Preset

Output 2 released when:

Hold time elapses or reset

SOLID STATE (OPEN COLLECTOR)

Terminal Nos.: 12 (Preset) and 15 (Batch Preset)

Type: Open collector, current sink

to COM. 30V DC max. 100mA

max.

RELAY

Terminals: Preset: 9 (N/C), 10 (C), 11 (N/O)

Batch Preset: 16 (N/C), 17 (C), 18

(N/O) Type:

Form C (SPDT)

Rating: 5A resistive @ 110V AC

3A resistive @ 240V AC

Mechanical

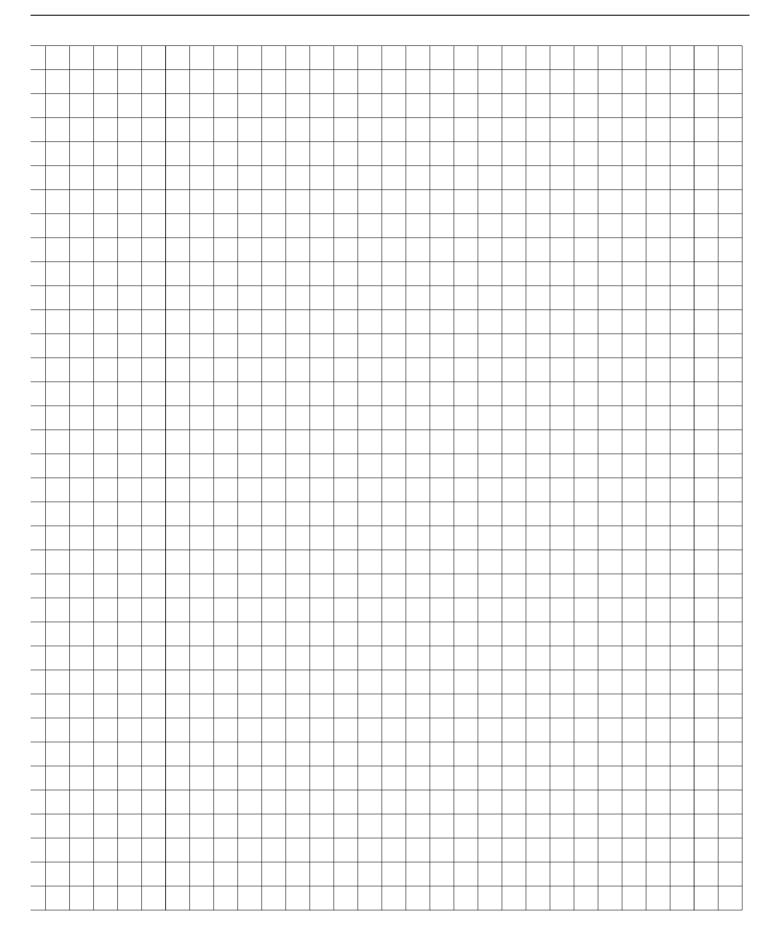

Cut-Out: 45mm x 45mm (1/6-DIN) Depth: 110mm Weight: 0.2kg approx.

Environmental

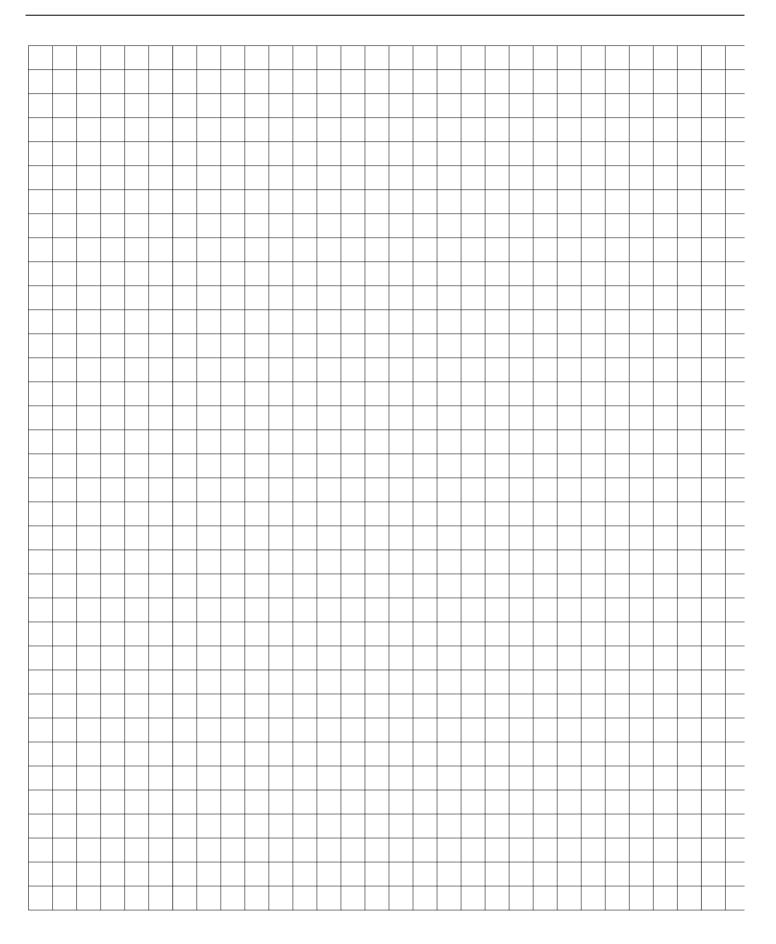

Operating Temp.: $0 - 55^{\circ}C (32 - 131^{\circ}F)$ Storage Temp.: 20 - 80°C (4 - 176°F) Relative Humidity: 20 - 95% non-condensing Front Panel Seal: NEMA 4/IP65 when installed with

panel gasket (supplied)

|ARRANTY

This instrument is warranted to be free from defects in workmanship and material for a period of three years from the date of despatch. In the unlikely event of a fault, call the appropriate number below for a Return Material Authorisation (RMA) number.

The obligation of the Company under this warranty is limited to the repair or replacement of this instrument. Should the cause of the fault be due to misuse or abuse of the instrument or the warranty period has expired, the customer shall be informed before any repair work is started.
